The Delta-3 DTKP Keypad is one of Linear's series of wireless radio controls designed for use with automatic garage door and gate operators. The Delta-3 radio format provides 256 different codes. In operation, the user enters their unique code on the unit’s keypad and presses the START/STOP button to activate the door operator. For up to 30 seconds after the last activation, the DTKP can be re-triggered by simply pressing the START/STOP button again. This allows the user to stop or reverse the opener quickly, without having to re-enter their code.

The DTKP has built-in keypad lighting for use at night or in dark areas. By pressing the START/STOP button first, before entering their code (or pressing START/STOP twice at any time), the user can light up the keypad. The clear silicone keys are backlit with a pleasing green glow.

**DESCRIPTION**

The DTKP is easy to use and effective. It is designed to be used with Linear's series of wireless radio controls. To use the DTKP, the user needs to enter their unique code and press the START/STOP button to activate the door operator. The keypad lights up with a green glow, making it easy to use in dark areas.

**STEP 2 Verify Receiver Installation.** Be sure the receiver is mounted (if removed) to the garage door operator as described in the receiver's installation instructions.

**STEP 3 Test receiver.** Be sure door area is clear. Try the keypad code. Enter a digit for each receiver switch “ON” position in descending order. The operator should activate when the START/STOP button is pressed after entering the valid keypad code.

**STEP 4 Mount keypad.** Use the two screws and screw anchors provided to mount the keypad to the wall. Be sure the keypad is at least five feet above the ground. After mounting the keypad, cover the screw heads using the two plugs supplied.

**INFO 1A Opening battery compartment.** The DTKP battery should last up to 5 years with normal use. To remove the battery door to replace the battery, remove the battery door retaining screws and slide the battery door off.

**INFO 1B Replacing battery.** Remove the low battery and replace it with a fresh 9-volt alkaline or lithium battery. Replace the battery door and retaining screws.

**STEP 5 Operation keystrokes.** See the illustration for examples of daytime and nighttime operation.

**DAYTIME OPERATION**

- Press USER'S SECRET CODE
- Press LIGHTS KEYPAD

**NIGHTTIME OPERATION**

- Press USER'S SECRET CODE
- Press LIGHTS KEYPAD

**LIMITED WARRANTY**

This product is warranted to the consumer against defects in material and workmanship for one year from the date of purchase. This warranty applies to the first retail purchaser of the product and is non-transferable. Linear warrants that the product will be free of defects in material and workmanship under normal use for a period of one year from the date of purchase. Linear’s obligation under this warranty is limited to repairing or replacing, at Linear’s option, any device it finds that requires service under this warranty, and will not include any device that requires service because of abuse, misuse, improper installation, or unauthorized modification or repair. Linear’s sole obligation and your sole and exclusive remedy under this warranty shall be the repair or replacement of the product. Linear shall not be liable for any incidental, consequential, or special damages, or for any loss or injury sustained in connection with the use of the product. This warranty gives you specific legal rights and you may have other rights which vary from state to state.

**IMPORTANT!!!**

Linear radio controls provide a reliable communications link and fill an important need in portable wireless signaling. However, there are some limitations which must be observed:

- For U.S. installations only: The radios are required to comply with FCC Rules and Regulations as Part 15 devices. As such, they have limited transmitter power and therefore limited range.
- A receiver cannot respond to more than one transmitted signal at a time and may be blocked by radio signals that occur on or near their operating frequencies, regardless of code settings.
- Infrequently used radio links should be tested regularly to protect against undiscovered interference or fault.
- A general knowledge of radio and its vagaries should be gained prior to retaining screws and slide the battery door off.

- REPLACE WITH 9-VOLT ALKALINE OR LITHIUM BATTERY ONLY
- LIMITED WARRANTY
